**ACADEMIC YEAR-2021-22**

**(DATE: 30/05/2022)**

**The department of chemistry visited AD wines, Dindori**

On Monday 30<sup>th</sup> May 2022, the department organized an industrial visit to AD wines Dindori. During this industrial visit 49 T.Y.B.Sc. chemistry students participated. This visit was coordinated by Prof. Dr. T.B. Pawar and Dr. V.A. Adole under the guidance of Prin. Dr. B.S. Jagdale and Prof. Dr. K.H. Kapadnis. The Alumni Dr. Ravindra Waghchaure helped to organize this industrial visit. During this visit, students learned about wine technology and the winemaking process. During this, the Manager Deshmukh sir guided and explained all processes involved in the winemaking process.

During this visit, students learned-

How Red Wine is Made Step by Step

Step 1: Harvest red wine grapes.

Step 2: Prepare grapes for fermentation.

Step 3: Yeast starts the wine fermentation.

Step 4: Alcoholic fermentation.

Step 5: Press the wine. ...

Step 6: Malolactic fermentation

Step 7: Aging

Step 8: Blending the wine.

The visit started in the morning at 8.00 am and returned at 2.00 p.m.

## **Abstract**

- The purpose of this study is to examine the relationships between internet addiction and depression, anxiety, and stress in adolescents. Participants were 150 high secondary students who were enrolled in Mumbai University SSC Board, in Maharashtra. In this study, the Social Networking Addiction Scale, the AASC test for Anxiety, and the Depression Stress Scale were used. In correlation analysis, internet addiction was found positively related to depression, anxiety, and stress.
- According to path analysis results, depression, anxiety, and stress were predicted positively by internet addiction. This research shows that internet addiction has a direct impact on depression, anxiety, and stress.
- This cross-sectional study explored the impact of stress, social anxiety, and social class on Internet addiction among adolescents. It also showed that Internet addiction is positively correlated with stress and social anxiety and negatively correlated with social class. Social anxiety partially mediates the impact of stress on Internet addiction and social class indirectly influences Internet addiction by moderating the relationship between stress and social anxiety. In conclusion, there is a mediated-moderation effect between stress and adolescent Internet addiction. This means that adolescents from different social classes have different types of anxiety when they feel stress, which influences their choices concerning internet use.

## **Introduction**

- The rapid development of computers and the Internet has greatly changed people's work, study methods, and lifestyle, and has become an integral part of the modern world. The Internet is not only a tool but also a social environment in which cognitive subjects exist, the use of the Internet is the basic action of people in the digital environment.
- It has been shown that the world's Internet users have reached 2.5 billion. According to the statistical report on Internet development in India, with over 560 million internet users, India is the second-largest online market in the world, ranked only behind China. It was estimated that by 2023, there would be over 650 million internet users in the country. Youngsters in the age group of 12 to 15 years made up about 14 percent share of the total internet user base in India.
- Internet addiction is also called pathological Internet use or Internet overuse. The term refers to network usage behavior in which individuals cannot control them and the behavior impairs the daily function. Like other addictive behaviors, Internet addiction can be characterized by (i) overuse (ii) withdrawal and anger or depression when computers are unavailable; (iii) tolerance (more time to use to meet needs); and (iv) negative social impact.
