Background:

Day by day soil pollution is increasing and thereby decreasing the fertility of the soil. The reason for this is a large amount of usage of chemical fertilizers. Farmers are not having scientific knowledge of chemical fertilizers. Therefore, they do not know to what extent one should use the fertilizers. Similarly, water quality is an important issue all around the globe. Nashik district is having a large population that is involved in the agriculture field. More importantly, our students belong to rural and tribal parts of the district. So, we felt that if we organize workshop on this hot issue, students can share their knowledge with their family, friends, and nearby community. Ultimately, the scientific knowledge of this subject can reach a wider part and farmers can be benefited from this.

The workshop was organized specially for B.Sc. and M.Sc. chemistry students. In this workshop, Mr. Shivaji Khandve discussed various parameters to maintain healthy soil. He suggested that to maintain healthy soil, we need to know a deeper understanding of parameters like pH, Texture, Nitrogen, Phosphorus, Potassium, Micronutrients, etc. He told that the overuse of chemical fertilizers has resulted in serious soil degradation, nitrogen leaching, soil compaction, a decrease in soil organic matter, and a loss of soil carbon. Furthermore, the efficacy of chemical fertilizers on crop yield has declined over time. The parameters of water quality like dissolved oxygen, turbidity, bioindicators, nitrates, pH scale, water temperature, etc were discussed during the session.

Students asked some queries like fertilizers and pesticides used for Grape farming and their impacts, the impact of TDS content in water on the human body, the type of soil in Nashik district, nutrients required for rice farming, etc. Students suggested that we should visit the Sanjeevani Laboratory & Ent. Nashik so that they can perform the actual soil analysis experiments.
